Swayanshu Mohapatra

Product Manager — AI Agents, Low-Code/No-Code & 0→1 Products
goluharris11@gmail.com | linkedin.com/in/swayanshu-mohapatra | tiinkr.com

CORE SKILLS

- **AI-First Building:** Claude Code, Cursor, Multi-Agent Systems, Agentic Loops, Prompt-to-Application Builds, Multi-LLM Routing, Prompt Engineering, Voice & Conversational Agents
- **No-Code/Low-Code & Automation:** Workflow Design, Agent Apps, Custom Screens, OCR & Document Automation, iPaaS Integrations (APIs, Triggers, RBAC, DLQ)
- **Problem to Adoption:** Problem Discovery, Scoping, 0→1 Product Building, First-User Onboarding, Iteration, Prioritisation, Stakeholder Management
- **Data & Analytics:** SQL, BigQuery, Looker Studio, Power BI, Kibana, Elasticsearch, Splunk
- **Engineering:** Python, Java, JavaScript, ReactJS, SpringBoot, Django, C++, MongoDB, Docker, Kubernetes, AWS, Git

FEATURED PROJECT

Tiinkr — AI Product Architect Platform | tiinkr.com

Co-Founder & Builder · Live product · Built with Claude Code (earlier Cursor)

- **Problem and product:** Turns a plain-language idea into a structured PRD (personas, feature epics, UX flows) and a clickable prototype through a guided Discover → Architect → Build flow, so an idea can be tested before engineering time is committed.
- **Built with my own hands:** Designed, coded, and deployed end-to-end myself (concept, UX, full-stack, auth, AI chat) using Claude Code, and earlier Cursor, as my default way to build.
- **Training Camp:** A scenario-based PM skills trainer that grades judgment on problem framing and trade-offs, with progress tracked through streaks and XP.

EXPERIENCE

Associate Product Manager — Growth Team | September 2026 – Present

UnifyApps · Remote

- **Ideas to apps, daily:** On the Growth Team, my day job is taking an idea or customer problem and turning it into a working app on UnifyApps' low-code/no-code platform, now with agentic loops and prompt-to-application flows where a plain-language prompt generates a full application.
- **Problems to working solutions:** On the Proof-of-Concept team for a large enterprise account, scoping the problem with the customer's team and building solutions with their engineers across APIs, integrations, RBAC, DLQ handling, and triggers.
- **Multi-agent design:** Lead design of a multi-agent workspace for a government healthcare client, combining on-demand and scheduled agents for C-suite users and defining each agent's scope and handoffs.

Senior Product Analyst — Growth Team | April 2026 – September 2026

UnifyApps · Remote

- **Built and adopted internally:** Architected Unify Brain, an internal AI agent for the sales, marketing, and ops teams across HubSpot, Google & Microsoft Suites and 500+ connectors. A team of agents, each owning multiple tasks, routed across multiple LLMs to balance cost, latency, and quality. Now used company-wide, saving Sales and Product teams 5+ hrs/day.
- **Cost and accuracy:** Built a data-heavy meet-prep agent for a pharmaceutical customer ingesting 1M+ rows across Salesforce, Azure Blob, and proprietary docs. Cut token use per run from about 1M to 200–300K, checking outputs against the format the client had specified.
- **Business impact:** Drove $850K+ independently and $1M+ in team efforts in new deals.

Product Analyst — Growth Team | September 2025 – April 2026

UnifyApps · Remote

- **Ideas to apps:** Took ideas from conversation to deployed apps on the low-code/no-code platform: voice, video avatar, banking, transactional, and multi-agent committee workflows, from ideation through backend workflows, low-code screens, and custom code.
- **Automation:** Built invoice OCR workflows saving 70–80% processing time and Groovy-based sheet automation for Power BI dashboards (60%+ effort saved). Delivered an end-to-end admission flow for a UAE digital authority.

Software Developer — PwC India | January 2024 – August 2025

PwC India · Gurgaon, India (Intern → Associate)

- **Backend & analytics:** Developed core backend login services and Kibana/Elasticsearch analytics integration, improving observability and metric consistency. Built a dynamic PDF generation system and Keycloak-integrated role-based dashboards.

Software Engineering Intern — Walmart Global Tech | May 2023 – August 2023

Bangalore, India

- **Automation:** Built a GitHub–Slack pipeline for Concord reviews and Ansible deployments (80% less manual effort) and Looker Studio cost dashboards on GCP and BigQuery.

EDUCATION

B.Tech — Electrical & Electronics Engineering | Nov 2020 – Jun 2024

Birla Institute of Technology, Mesra · Jharkhand, India — GPA: 8.04

12th / CBSE — 95.60% | 10th / CBSE — 84.20% · 2020 / 2018 · D.A.V Public School, Gandhinagar, C.C.L · Jharkhand, India

POSITION OF RESPONSIBILITY & EXTRACURRICULAR

- 180 DC BIT Mesra — Founding Team Member, Outreach & Mentorship (Dec 2021 – Dec 2022) | IMTheFuture 5.0, IMT Ghaziabad — Finalist, Top 15 of 500+ teams
